

01 - Introduction to Markdown

Markdown is a language we can use to make plain text look good.

Heading or Header

We create headings in Markdown using the hash symbol. We can also create subheadings using multiple hashes.

level two heading

level three heading

level six heading

styling characters

We typically use **bold** and *italics* to style characters when we type something.

We can also use underscores to **bold** and *italicize* text.

You can ***bold and italicize*** characters.

If you like to use stars, use stars only. Same with underscores. `In other words, be consistent`

Links

Markdown is a language that translates from plain text to another language called `HTML`. `HTML` is the language that web pages are built with.

We use brackets to create links in Markdown. `[]`

This is a link to [ChatGPT](#)

[Google](#)

[SLSS](#)

Images

We can embed linked images using the same style.

Escape Characters

The asterisk is a special symbol in Markdown. It's used to make characters bold.

******I would like to put tow starts here.

We can use an escape character to put in the literal symbol or character.

__ \

The escape character in Markdown is a backslash. (\)

Lists

- This is a list
- This is a second item in the list
- You can also use asterisks for lists
- And it produces the same thing
 - This is a subpoint in a list (Hold shify then press enter or return)
I can continue here
 - Another level down

To do list

- ☒ Hello
- ☒ Hair cut
- ☐ Groceries
- ☐ Run 8k

Code Blocks

Code blocks allows us to type code and have it styled.

```
name = "Mr.Ubiał"  
print (name)
```
